

Date:

Wednesday Challenge Form

Group Members: Nick and me

Problem Statement: we are trying to make a box that another team made to ship a chip

Approach: Nick and me were making our box to give to another group. While Nick was doing the math I did the crafting with nicks help as well. Some how the other group found out that it was our box and started asking a lot of questions. LOL as many times as they asked I still wouldn't give it to them cause it would disqualify them.

Solution: making the inside of the box the same size as the chip so it can stay in place.

Lessons Learned: letting each other do there Specialty makes the process faster.
